**KAZNARU scientists are implementing a research project
with the participation of Indian professor SUMANT VYAS**

✓ At the Kazakh National Agrarian Research University, at the Department of clinical disciplines "of the Faculty of Veterinary Medicine and Zooengineering, local research scientists are conducting research on a research project with the participation of a well-known professor from the Indian state Sumant Vyas.

✓ A well-known scientist in the international community in the field of breeding and reproduction of camels, head of the Department of animal husbandry and pasture management of the Central Dry Zone Research Institute of India Sumant Vyas shares his qualifications in the exchange of experience, mastering research techniques.

✓ Innovative modern equipment and computer technologies in the Clinical Laboratory of the University provide favorable conditions for the development of educational and laboratory and research work at a high level. Qualified scientists carry out a lot of educational, methodological, research, educational work, as well as provide real practical assistance to agricultural entities. In the conditions of the clinic, there are parking (raskol) and ultrasound devices specially prepared for camels.

✓ "Professor Sumant Vyas teaches Kazakhstani scientists methods of rectal examination of camels, ultrasound scanning of reproductive organs of camels. Since there is very little information about the reproductive system of camels, this issue requires a deeper study. Indian scientists have extensive experience in this field, in particular, experience in the development of technologies for artificial insemination of camels, embryo transfer. We are grateful to our foreign partner," said Esengali Usenbekov, professor of the Department of clinical disciplines
