

In the 2024-2025 academic year, students enrolled in the educational program 6B09101-Veterinary Medicine in full-time education on the basis of a state grant and a paid contract were sent to industrial practice in the farms of each region in accordance with the academic calendar. Students of the educational program 6b09101-Veterinary Medicine meet before leaving for an industrial practice, where they are reminded how to start work from the moment they visit the farm and carefully familiarize themselves with the work of a veterinarian, take part in all veterinary events held on the farm, take part in them, fill out a diary about the passage of industrial practice and, finally, write a report. The purpose of industrial practical practice is to consolidate theoretical knowledge, improve practical and organizational qualifications in the specialty. The content of industrial practical practice: practical development of the scope of work of regional veterinary stations, agricultural complexes, meat and dairy control stations, feed control, veterinary laboratories; Production practice is studied according to the following requirements: organization and management of the economy, agricultural production, the state of the feed base, livestock maintenance, the mechanism of production processes, etc.; maintenance, treatment and preventive measures of sick animals; pathoanatomic slaughter research and disposal of livestock waste; labor organization, safety, labor safety, industrial sanitation, nature protection, educational work, etc.;

Practice (practice bases, main partners and dual training)
