

GREEN CAMPUS
KAZNARU'S CLIMATE ACTION PLAN
(2022-2032)

Kazakh National Agrarian Research University (KazNARU) has been working on a new sustainability plan, the implementation of United Nations Academic Impact (UNAI) Principles, and developing a draft Green Campus Concept since the beginning of the academic year 2020-2021. This is KazNARU's roadmap to contribute to sustainable development, implementation of the sustainable development goals (SDGs) and the Global Climate Action Agenda

WE MAKE A DIFFERENCE TODAY!

KazNARU's Climate Action plan envisions that every member of the community has his/her role to play in achieving the SDGs. The implementation of the Green Campus Concept is one of the ways to make a difference and contribute into building a sustainable KazNARU's campus, introduce innovative approaches to developing healthier student life and to become a model for other universities in Kazakhstan in the development their very own Green Campus projects.

Plant a tree; grow a flower!

KazNARU's Green Campus Concept envisions that every student and every faculty member can and should plant trees and flowers in and outside of the university's campus every year! The university plans to plant additional flowers and trees to beautify its campus and to involve local communities and the international campus in the greening process.

Reuse and recycle!

We would like to encourage all students and every faculty member to recycle or reuse unwanted items including plastic bottles, paper, electric batteries, old mobile

phones, furniture, equipment and other items. The appropriate collection boxes would be established around the campus in 2022.

Walk, bike, or go electric!

We would like to encourage all students and every faculty members to walk and/or to bike to the university's campus! KazNARU plans to develop safe and secure bicycle parking areas and encourage everyone to contribute to reducing carbon emission and implementing our Climate Action Plan by adapting healthier lifestyle and embracing sport!

Volunteer to lead sustainable development goals (SDGs)!

We would like to encourage all students and every faculty member get involved as volunteers into the activities and campaigns of United Nations Academic Impact (UNAI) Programme, and various other volunteer activities initiated by local NGOs, university, international partners, UN agencies, and various other stakeholders

Report water drips and window leaks!

We can save a lot of water and energy by taking care of our working environment and by submitting maintenance requests to make your space more comfortable and efficient.

Reduce electricity use!

We would like to encourage all people to turn off electric lights, and equipment, and unplug electronics when not in use! It is especially important during nights and school breaks! An important part of it is to promote reducing electric use among close friends and colleagues and public!

Promote the usage of reusable bottle!

We would like to encourage students and every faculty members to use filtered water stations across campus to refill their bottle and to use reusable bottles as much as possible.

Learn it: Courses and training on SDGs

Browse KazNARU's website, Course Guidebook, social media, and events calendar to learn about environmental and climate change studies.

Adopt healthy, sustainable lifestyle habits!

Take the Green Week pledge to participate in greening activities, climate action plans and/or to learn how to make changes in your lifestyle, starting with what you eat, and what you can do to help the university to reduce our environmental impact.

Bring a friend: Publicize the Green Campus project!

We are putting together a Green Campus and Climate Action Plan by organizing sustainability events and/or initiative on campus. We would like to encourage publicizing the events through posters, PowerPoints, social media, and flyer about the Green Campus project.
